Research

Between 1992 and 1998, Dr. McCalley's research in electric power spanned three areas: security assessment, control and analysis of interarea oscillations, and educational modules for power engineering. From 1998 to 2004, Dr. McCalley continued the work on security assessment and educational modules, and has also become engaged in four additional areas related to power and energy systems: asset management, integrated analysis of multiple energy systems, defense systems for preventing catastrophic consequences following disturbances, and control system planning. Since 2004, Dr. McCalley has concentrated his research on these latter four areas winning large interdisciplinary NSF awards for the first two.
